

PEAK STAGE DIFFERENCES mD1-STAc

Percent of years with max stage at least
0.25 ft higher than m-STAc

11 Jul 2006 20:25:03 Tuesday

Note: Map values do not distinguish between groundwater and surface water and should only be used as a general indicator of subregions that may have a change in peak stages. Those subregions require more detailed investigation and analysis before site-specific inferences about changes in flooding risk can be made.
